

Tech Stack

- Frontend: Flutter
- Backend: Java
- Database: MySQL
- Version Control: GitHub

Functionality/ Task List:

- ☐ **Authentication + User/ Admin Roles**
- ☐ **Job Application Management**
- ☐ **Follow-up Alert**
- ☐ **Document Vault for Resumes/ Cover Letters**
- ☐ **Dashboard**
- ☐ **Reports**
- ☐ **Build our database**

Naming Convention so we're on the same page while coding:

- Any class: PascalCase (ex: JobApplicationService)
- Any variable/ method: camelCase (ex: createJobApplication())
- Database table: plural snake_case (ex: job_applications)
- Database column: singular snake_case (ex: user_id)

Folder Structure (already in main branch if you haven't pulled)

- frontend/ #Flutter app code
- backend/ #Java backend code
- database/ #SQL scripts and ERD
- documentation/ #diagrams, notes, requirements

MySQL Database (everyone can login to work on database together):

URL:

mysql://avnadmin:AVNS_gI3cKIkKq0LLFgjY8hl@aiven-mysql-hexadecimus-apptacker-avien-hexadecimus-apptacker.d.aivencloud.com:16344/defaultdb?ssl-mode=REQUIRED

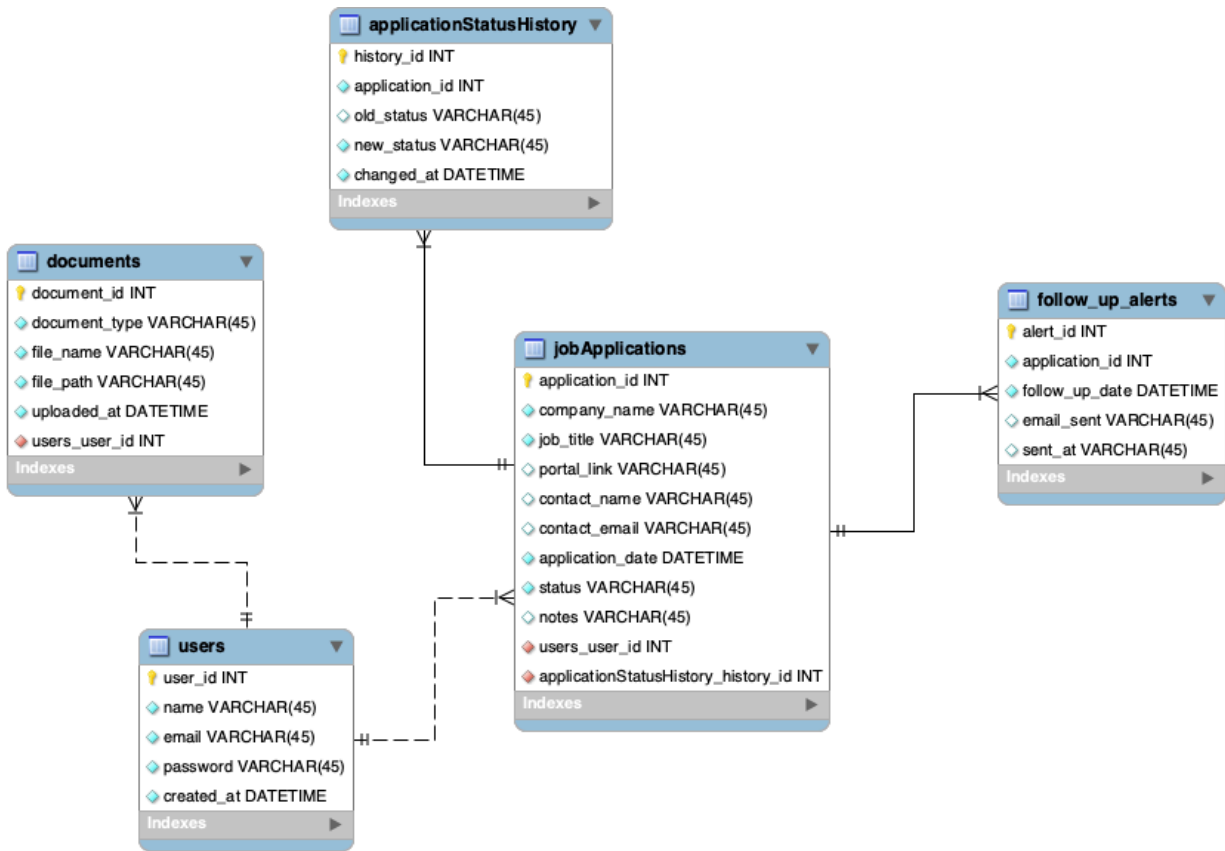

Host: aiven-mysql-hexadecimus-apptacker-avien-hexadecimus-apptacker.d.aivencloud.com

Port: 16344

User: avnadmin

Password: AVNS_gI3cKIkKq0LLFgjY8hl

Database ERD model
